# Technical Excellence for cookware Nonstick Coating

With a specialty high performance polymer topcoat for extremely long-lasting nonstick.

Heavily reinforced with Sic formations. Significantly improved scratch resistance.

# NEW LAVA PAN

## Forged lava flow textured surface

A lava flow texture forms on the surfaces of the cookware through forged process. When you are cooking, the texture creates micro air pocket between the pan and your food that results in natural non-stick release that is *TEN TIMES* better than traditional non-stick coating.

Micro air pocket eliminates hot spots and evenly distributes oil so the entire interior surface can be covered for better searing and professional results.

Cleanup is easy-all you need to do is a quick wipe.

- Even heat distribution thanks to Lava flow and pore design.
- Allows for better release than smooth surface
- Allows the oils to adhere to the pan's cooking surface

# Marble Nonstick

## Advantages:

1. Aluminum design allows for fast and even cooking.
2. Marble triple-layered nonstick coating interior.
3. Stainless steel hollow handle or Soft touch bakelite handles are optional, ergonomically designed and comfortable grip.
4. Tempered glass lid are for easy monitoring of cooking process
5. For use on all stove tops including induction.
